Postdoctoral Research Fellow
Division of Women's Health, Department of
Medicine
Brigham and Women's Hospital

Unraveling the Mind: Examining Behavioural, Neurobiological and Physiological Trends in Effort-Based Decision-Making

Dr. Brassard's talk, "Unraveling the Mind: Behavioural, Neurobiological, and Physiological Signatures of Effort-Based Decision-Making," will highlight emerging evidence on the neural and cognitive-affective mechanism supporting goal-directed behaviour in disordered eating and addiction. She will discuss recent findings from neuroimaging studies and physiological stress-response measures, with an emphasis on how altered motivational processes shape clinical outcomes and inform intervention development.
